

HUBER looks back on a great deal of success at the trade show PARKEN 2015

Once again, the HUBER-exhibition stand was much frequented. It was the first time that HUBER car park systems international GmbH was also represented at the booth. Due to the international character of this year's PARKEN, which took place in conjunction with the 17th EPA-Congress in Berlin, HUBER – a pan-European car park specialist - was able to put its best foot forward.

On the occasion of the 25th company anniversary it stood out with a large range of representative turn-key car park projects. More than 170 car parks demonstrate the entrepreneurial drive of the medium-sized firm. Being an all-rounder, HUBER has long become a leading company in the car park trade.

The service areas of DESIGN, FINANCE, BUILD, OPERATE and MAINTAIN cover all interesting and useful aspects concerning car park construction.

In addition to its outstanding and highly individual car park designs, HUBER especially distinguishes itself from the competition by the flexibility of the HUBER-System.

Parking bay and aisle widths can be adjusted on customer request; unsupported spans of up to 17 m are possible. The creation of optimized traffic concepts as well as energy efficient and sustainable building services engineering is based on detailed and solid expertise and extensive professional know-how.

Visitors to the trade show approached HUBER with many new projects; this confirms HUBER's belief that quality, experience and a good service culture do make a difference.

HUBER wishes to take this opportunity to extend another cordial **“Thank you for visiting us!”** to all our customers, business partners and other interested visitors.
